

(SPA # 1)  
 Air Manifold -  
 360 degrees  
 around spa,  
 run high in the  
 beam, above  
 all jets to  
 properly feed  
 each  
 Atmospheric  
 Venturi Tee.

(SPA # 1)  
 Hartford Loop  
 - placed well  
 above rebar,  
 double looped  
 before  
 returning  
 underground  
 for added  
 protection  
 against water  
 filling the  
 underground  
 run to the  
 termination  
 point, air line  
 should  
 terminate 18"  
 above spa  
 water line at a  
 nearby planter  
 or at pool  
 equipment  
 location.

(SPA # 1)  
 Water  
 Manifold exit  
 to Venturi Tee  
 - reduced size  
 to increase  
 back pressure  
 and to feed  
 the reduced  
 size of the  
 Venturi Tee

(SPA # 1)  
 Water Manifold - 2" in this picture for 5 Jets,  
 360 degrees around spa, exiting return line in  
 both directions for equalized pressure to  
 each jet.

(SPA # 2)  
 Air Manifold (Pic 1 & 2) - 360, high in beam,  
 run above jets, hartford loop above rebar  
 and for added protection run in oversized  
 lines.  
  
 Water Manifold (pic 3) - 360, exiting return  
 line in both directions for equalized  
 pressure (not shown), reduced size from  
 manifold to Venturi Tee.
