

## PERMAKOTE™ SCRATCH COAT SYSTEM

## PERMAKOTE™ Save Time & Money

**PermaKote™ Scratch Coat System** - a polymer modified, cement based coating - is formulated for easy application, as well as increased performance while delivering superior bonding between properly prepared substrates and new plaster coats. The result is increased reliability, decreased warranty call backs and 5 year extended warranties on **CL Industries** pre-blended pool finishes.

# PERMAKOTE™

The PermaKote™ system saves labor and equipment costs, while virtually eliminating delamination problems.

A coarse grip insures a rock solid bond while providing an even cure for plaster application.

PermaKote drastically reduces substrate prep work.

Eliminates "Popouts" & "Delaminations"

**PermaKote is sold in 80lb polylined bags.**

The PermaKote™ system eliminates excessive substrate preparation, such as sand blasting or stripping which may reduce material usage for the new plaster coat by up to 30%, and promotes even hydration and curing – especially beneficial when using an exposed aggregate surface.

- **Save Time & Money**
- **Increases Overall Reliability**
- **Virtually Eliminates Delamination**
- **Superior Performance**
- **Reduces Warranty Callbacks**
- **Extended Warranties Available**
